## Polar Bears

A polar bear crouches by a hole in a sheet of ice. Minutes 13  
 go by; the polar bear doesn't move. Then, without warning, 23  
 the polar bear's paw flashes into the hole, and he drags a seal 36  
 out onto the ice. 40

Polar bears are some of the largest and strongest land 50  
 mammals in the world. They are also some of the world's 61  
 best hunters. Polar bears are meat-eaters, and most polar 70  
 bears survive by eating seals. 75

Polar bears are found in the Arctic region to the far 86  
 north, and they are well adapted to this cold, unforgiving 96  
 environment. Polar bears have white fur from birth, making it 106  
 easy for them to blend in with the Arctic snow and ice. Their 119  
 claws are short and thick, helping them to keep their footing 130  
 on icy surfaces. Polar bears also have broad feet that help 141  
 them to walk on thin ice and swim in the ocean, sometimes 153  
 for incredible distances. Recently, polar bears have been 161  
 tracked on long-distance swims of thirty miles and more. 170
